Composite Bond Tester

OLYMPUS[®]

BondMaster 600

BondMaster[®] 600 Tester Intuitive Bond Testing

- High signal quality
- Multiple modes
- Application presets
- Full-screen display
- Complete archiving and reporting solution

BondMaster[®] 600 Multimode Bond Tester High Performance Through Intuitive Operation

The BondMaster[®] 600 bond tester delivers a powerful combination of multiple mode bond testing software and highly advanced electronics, providing consistently crisp and high-quality signals. Whether you are inspecting honeycomb composite, metal-to-metal bonds, or laminate composite, the BondMaster 600 bond tester offers exceptional ease-of-use thanks to its direct-access keys and a streamlined interface that features convenient presets for common applications. The instrument's enhanced user interface and simplified workflow offer archiving and reporting that are accessible to any level of user.

The resolution and brightness of the 5.7-inch VGA screen become even more apparent when switched into full-screen mode. Activated simply by touching a key, the full-screen mode is always accessible regardless of the display mode or inspection method you are using. The BondMaster 600 bond tester is programmed for a range of standard inspection methods, including pitch-catch RF, pitch-catch impulse, pitch-catch swept, resonance, and an improved mechanical impedance analysis (MIA) method.

Portable, Lightweight, and Ergonomic

The instrument's ergonomic design is convenient for difficultto-access inspection locations. For inspection in tight spaces, the factory-installed hand strap provides maximum comfort while maintaining access to the most critical functions.

Field Proven

The BondMaster 600 bond tester's case, based on a rugged, field-proven design, is built to withstand harsh, demanding inspection conditions. With a long battery life, airtight and water-resistant enclosure, high-friction bumpers, and dualduty support stand/hook, this bond tester is a valuable tool for challenging inspection jobs.

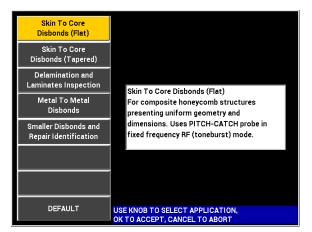

Key Features

- Designed to meet the requirements of IP66.
- Long battery life (up to 9 hours).
- Compatible with existing BondMaster POWERLINK[®] probes and probes from other manufacturers.
- Bright, 5.7-inch color VGA display.
- Full-screen option in any display mode.
- Intuitive interface with application-specific presets.
- Instant display mode toggle using the RUN key.
- New SCAN view (profile).
- New SPECTRUM view and frequency tracking feature.
- Direct-access key gain adjustment.
- All settings configuration page screen.
- Up to two real-time readings.
- Storage capacity of up to 500 files (program and data).
- Onboard file preview.

Simplified Interface and Vibrant Display Instant Configuration and Direct Access to All Settings

One of the major assets of the BondMaster[®] 600 bond tester is its ease of use. Its streamlined and user-friendly interface was developed by incorporating innovative features from other Olympus products and combining them with several new functions, including the application selection (presets) menu, the all settings direct modification screen, and the ability to calibrate signals while in freeze mode.

All the advantages offered by the BondMaster 600 interface are available in 15 languages.

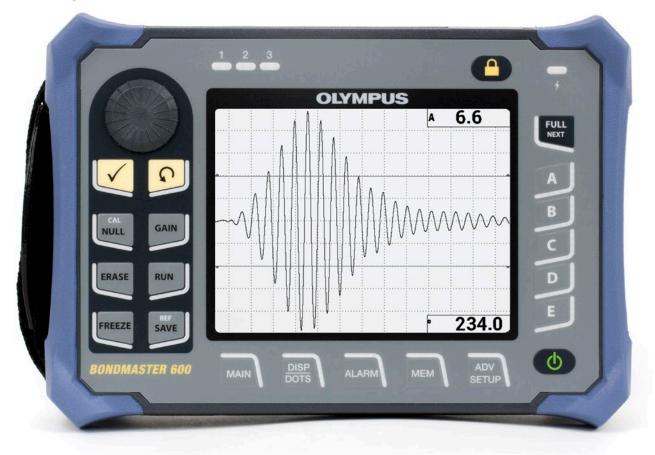

ALL SETTINGS PC (RF)								
MODE	PC (RF)	FREQ	10.0kHz	XY ALM 1	NEG			
PROBE TYPE	Broadband	ANGLE	120.0deg	SHAPE	BOX

The application selection menu provides instant, ready setup to the user.

The all settings screen shows all parameters for rapid editing.

True Full-Screen Mode and Direct Access

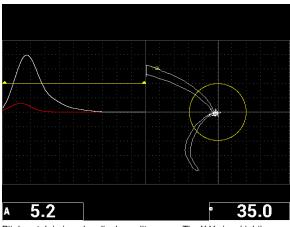

The BondMaster 600 bond tester features a comprehensive set of direct-access keys, enabling instant adjustment of commonly used parameters such as gain, full-screen mode, display mode (RUN), and more. Signals are displayed in eight vivid and identifiable color schemes, and the screen's enhanced visibility in indoor and outdoor conditions helps reduce operator eye fatigue.

Outstanding Signal Quality Enhance Your Honeycomb Composite Inspection Capability

During bond testing inspections, the pitch-catch probe produces flexural plate waves and compression waves and compares changes in the signal amplitude between the probe's transmitter and receiver as it passes over the inspected part, detecting disbonds on both the near and far side. The BondMaster[®] 600 bond tester offers three pitch-catch mode options: RF (fixed frequency waveform), impulse (legacy view featuring an envelope filter), or swept (sweeping through a selected frequency range).

The instrument's pitch-catch menus have been optimized to provide fast access to the parameters that are adjusted most frequently during calibration and inspection. The real-time readings provide instantaneous information on the signal amplitude or phase, enabling you to interpret flaws more easily. The new auto gate mode automatically detects the best "gate" position based on the RF or impulse signal, reducing operator error and maximizing the results.

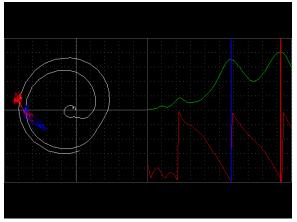

Pitch-catch in impulse display split screen. The X-Y view (right) shows a record of both near and far side disbonds (phase difference).

OEM Friendly: New Frequency Tracking Tool for Procedure Development

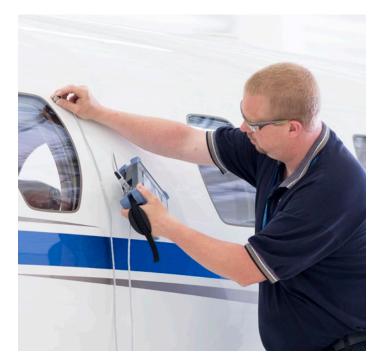

The BondMaster 600 pitch-catch swept mode not only features improved signal quality but also has a new "Spectrum" representation. This new view displays the live amplitude and phase of the signal compared to the frequency range. Two new frequency markers (called frequency tracking) enable you to observe the behavior of two specific frequencies so that you can choose the best detection parameters for a specific application. This new tool is ideal for developing procedures or new applications.

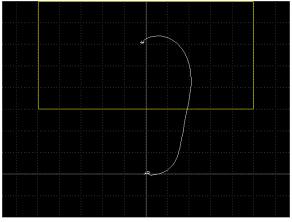

Spectrum view with frequency tracking.

Resonance Mode Presets to Meet Your Needs Easy Inspection of Metal-to-Metal Bonds and Laminate Composites

Resonance mode measures the changes in phase and amplitude of the propagating/standing wave within the probe. Resonance probes are narrow bandwidth contact transducers, and the change in probe crystal impedance is represented in the X-Y instrument's display.

Resonance mode is a very simple and reliable way to detect delamination. Often, the depth of delamination can be estimated from signal phase rotation. Resonance mode on the BondMaster[®] 600 bond tester is remarkably easy to operate, due in large part to its factory presets for laminate composite and metal-to-metal disbond applications.

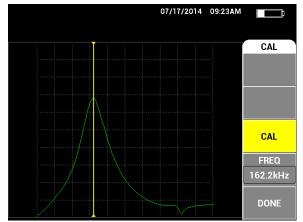

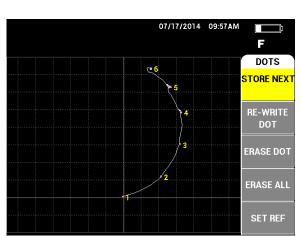

Resonance mode configured as "go/no-go".

Simplified Calibration through an Optimized Interface

Calibrating the BondMaster 600 bond tester's resonance mode has been simplified to a minimum number of steps. First, the optimum operating frequency for the probe is selected through the single-step calibration menu, and then the instrument's streamlined interface and the ability to calibrate from frozen signals make the final calibration quick and simple.

Once calibrated, the improved signal reference and reference dot system enable you to easily track critical signals on the display during inspection. Moreover, its reference points system is so flexible that you can fine-tune the calibration without having to rerecord the points.

Improved reference dot system of the BondMaster 600 bond tester.

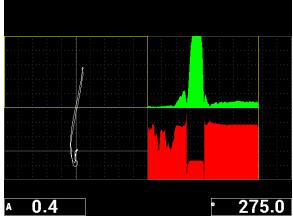

Calibration menu automatically selects the best working frequency.

Witness the Power and Precision of MIA Mode Detect Small Disbonds in Honeycomb Composite

The bond testing mechanical impedance analysis (MIA) method measures the mechanical impedance, or stiffness, of a material. MIA probes emit a fixed, audible frequency. Changes in material stiffness are indicated as signal amplitude and phase changes in the X-Y view of the BondMaster[®] 600 bond tester.

The small probe tip used with MIA, coupled with the highperformance electronics of the BondMaster 600 bond tester, make detecting very small disbonds in honeycomb composite much easier than with other methods. Moreover, the instrument's extended MIA frequency range (2 kHz to 50 kHz) obtains maximum results, even for far side disbonds.

A simple MIA calibration wizard guides you in selecting the best frequency for detecting smaller and otherwise hard-to-find defects in honeycomb composite.

MIA mode with new "scan" view and real-time readings.

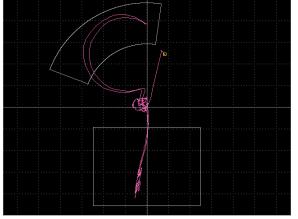

The BondMaster 600 bond tester also displays real-time readings showing signal amplitude or phase, and its new "scan" view enables you to monitor the probe amplitude and phase over time, aiding in the detection of small disbonds.

Indentifying Repaired Areas (Potting) in Honeycomb Composite

Identifying repaired areas on an aircraft's rudders or fuselage can be a challenge, especially when they are painted. With certain inspection methods, such as thermography, repairs can generate false indications. However, MIA mode can resolve this problem. Because the repaired area is generally stiffer, its mechanical impedance contrasts well with good areas as well as with disbonds.

The improved MIA method offered by the BondMaster 600 bond tester enables you to identify repaired areas with ease through a simple phase analysis of the MIA signal in the X-Y view.

MIA mode configured to identify a repaired area (bottom signal) as opposed to a disbonded condition (top signal).

Complete Inspection, Archiving, and Reporting Solution Simplified Workflow for Any Level of User

The BondMaster[®] 600 bond tester offers a streamlined and straightforward process for tracking your inspection results. Built-in features such as a large storage capacity (up to 500 data and program files) and an onboard file preview facilitate the inspection process, from start to finish.

A typical workflow consists of a few simple steps: save your results during the inspection process, download the saved files to the BondMaster PC viewing software, instantly generate a full inspection report using the "export all files as PDF" function, and archive the report if required.

1. Inspect

Press the SAVE key anytime during the inspection to record signals as viewed.

Quickly download results to BondMaster PC through a USB connection.

Produce a complete report with the touch of a single key and archive results as needed.

Two Models for Flexibility and Compatibility

The BondMaster 600 bond tester is offered in two models to accommodate the varying needs of composite bond testing. The basic model includes all pitch-catch capabilities while the B600M model features all bond testing inspection methods. The upgrade from basic to multimode can also be performed remotely.

Both bond tester models are compatible with existing Olympus BondMaster probes, including those equipped with the POWERLINK[®] technology. Optional adaptor cables are available to enable compatibility with probes from other manufacturers.

Application	Recommended Method	
General Honeycomb Composites Skin-to-Core Disbonds	Pitch-Catch (RF or IMPULSE)	
Honeycomb Composites Skin-to-Core Disbonds in Tapered Structures or Nonconstant Geometries	Pitch-Catch (Swept)	
Smaller Skin-to-Core Disbonds in Honeycomb Composite	MIA	
Identification of Repaired Areas in Honeycomb Composite	MIA	
General Detection of Delamination in Composite	Resonance	
Inspection of Metal-to-Metal Bonds	Resonance

Real-Time Readings	Choice of up to 2 real-time readings measuring signal characteristics (list depends on selected mode).	* Specific test modes have limitations within this range.		

Standard Inclusions

The BondMaster 600 bond tester comes with the following standard inclusions:

Model: Basic and Multimode (M).

Power cord: Over 11 power cord models available (for the DC charger).

Keypad and instruction label: English, international (icons), Chinese, or Japanese.

Getting Started print manual: over 9 languages available.

Items included in all BondMaster 600

models[†]: BondMaster 600 instrument with factory-installed hand strap, getting started manual, calibration certificate, rigid transport case, DC charger with power cord, Li-ion battery, AA battery tray, USB communication cable, microSD[™] memory card and adaptor, pitch-catch and MIA probe cable, and BondMaster PC software and product manuals disc.

Additional items included in BondMaster 600M model only: Resonance probe cable.

[†]Standard inclusions may vary depending on your location. Contact your local distributor.
